

Flexible and Easy-to-Use Validation Platform is the Smart Way to Validate

Overview

Our web-based validation system powered by the FLASH platform provides operators and asset owners an intelligent way to validate parking from any connected device

Types of Validations

Electronic Validations

Are unique in that customers do not have to take any action for the validation to be processed; the validator simply accesses their FLASH portal to perform the validation. The validator manually enters the customer's ticket number, sets the validation price, and then confirms the validation. The new, validated rate will then be automatically applied to the customer's ticket.

Printed Validations

Printed Validations are a straightforward way for parking operators to serve visitors of the variety of different businesses it's garage or lot serves. With no need for special paper, individual and bulk barcode validations can be printed out on Avery labels. Parkers can apply the validation label to the back of their ticket that can be scanned at an exit or pay-on-foot kiosk after scanning the original ticket. The validated amount will immediately be deducted from the user's balance.

Validating by Text

Is a convenient option for users as it eliminates the need for customers to keep track of printed validations and doesn't require validators to log into the portal each time. Validators' phone numbers first need to be added to the Admin Portal in order to gain validation capabilities. Pre-approved validators can send a customer's ticket number to a specific phone number associated with the location. The validator will then receive confirmation that the customer ticket has been validated.

Validators and Managing User Rights

FLASH's validation system allows you to offer different validations for different validators. The operator uses a unique user name/password to access the revenue control system to create validations and manage user rights for each validator.

Flexible to Meet Your Unique Venue Needs

Our exceptionally flexible validation system can provide multiple scenarios for validations. It can calculate the remaining balance if the parker exceeds the validated time and request payment, therefore allowing you to capture additional revenue.

Are You Ready For The Future?
