## How Transient Parkers will use Mobile Payment/Text-to-Pay feature

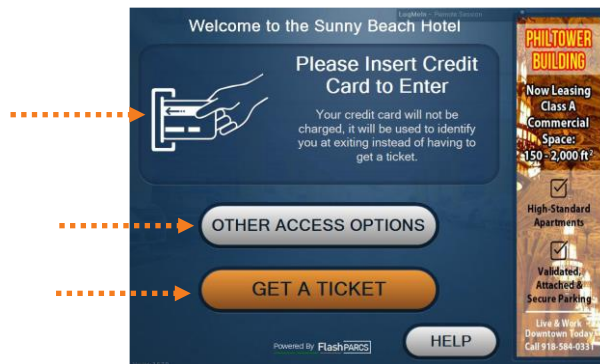

This is a contactless payment option that operators and asset owners can offer in addition to POF and in-lane payment options. When enabled, parkers can text the word "Pay" to a designated phone number that will push out a mobile payment link to the parker.

Instructions can be printed on tickets as well as on signage. Signage also gives parkers the option of scanning a QR code that populates the text with the correct number and SMS message.

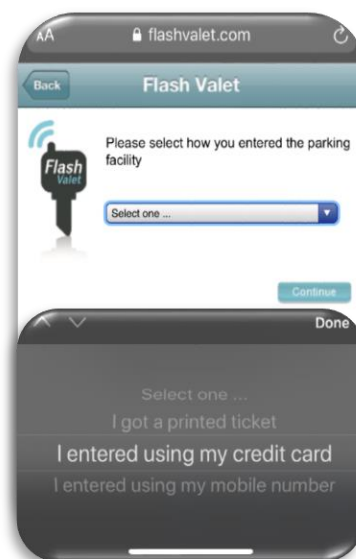

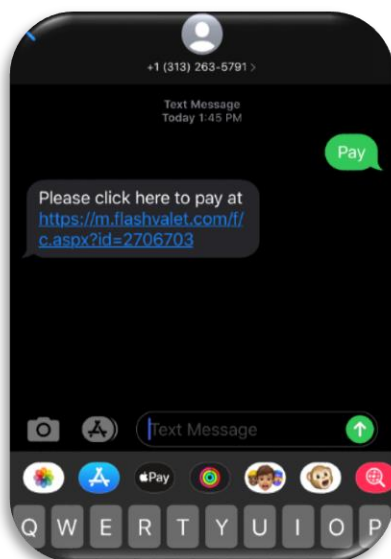

### Mobile Payment Flow

1. The parker selects **Get a Ticket**, **Inserts their Credit Card**, or selects **Other Access Options** on the entry kiosk screen.

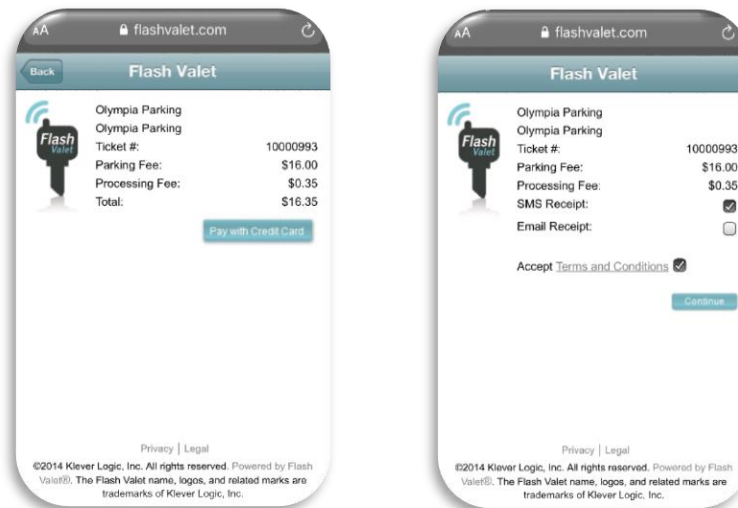

2. When the Parker is ready to pay, they Text **PAY** to the **Phone Number for the facility** which is printed on the bottom of the ticket. The parker selects their entry method from the scroll wheel and then selects **Continue**.

3. The parker inputs their **Ticket # OR CC Type, Last 4 and Last Name OR Mobile Number** and selects **Continue**.

4. The **Total** is displayed including the **Processing Fee of \$0.35**, parker then selects **Pay with Credit Card**. Parker can select **Receipt** method if desired. **Terms and Conditions** must be accepted then select **Continue**.

5. The Parker will input **customer details** including payment information and then **Continue**. Parker will receive **payment confirmation** and receipt if requested.
